Subject: Dam Breaching

The Klamath Alliance for Resources & Environment is opposed to the breaching of any dams for any reason. We do not believe this is a responsible or reasonable solution to problems with the coho salmon, or any other fish population.

It is very important that in our zeal to protect species, we not forget that Man has a valid place in this universe and to put protection of any species before Man and Man's needs is not reasonable. In the past 20 years we have gained an incredible amount of knowledge regarding the environment. We have technological skills that can enable us to protect all species, without destroying the ability of people to earn their living, or to enjoy and protect their private property rights. Let's become a Nation of problem solvers instead of a Nation of negative thinkers. Dam breaching is a negative permanent solution to a temporary problem.
